

victor

La struttura portante è uno scheletro, come la carena di una imbarcazione: le centine si innestano su una spina dorsale che percorre il tavolo in lunghezza: su questo scheletro, invisibile, è teso il cuoio, che modella le forme e lascia sentire, sotto-pelle, la presenza dell'ossatura portante.

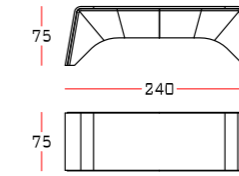

Sopra questo "scafo" si posa la struttura a "ponte" del top: in questo elemento si mixano parti in legno, con essenze scelte per la loro forte personalità, e parti rivestite in pelle, morbida e ineguagliabile sottomano nella zona centrale.

The supporting structure is a skeleton, like the hull of a boat: the ribs are inserted on a spine that runs along the table in length: on this invisible skeleton, leather is stretched, which forms the shapes and lets one feel the presence of the supporting frame.

Above this "hull" is the "bridge" structure of the top: in this area, various parts of wood are mixed, with essences chosen for their strong personality, and sections covered in soft and uncomparable leather, in the central area.

Struttura in legno multistrato e massello con finitura in essenza.
Top sottomano rivestito in pelle P3, P2.
Base rivestita in cuoietto P3.

Structure in plywood and solid wood finished with wood essence.
Top desk pad covered in leather P3, P2.
Base covered in thick leather P3.
