

forest

Forest è un’epifania architettonica che trasforma il limite della parete in un’apertura verso una natura astratta. Non è un semplice rivestimento, ma un paradosso poetico: vestire i muri per farli scomparire, riconnettendo lo spazio con l’essenza primordiale del paesaggio.

Il design sfida la rigidità geometrica attraverso linee diagonali e frammentate che evocano l’asimmetria vitale di un bosco. Grazie a una lavorazione a bassorilievo millimetrica, la superficie vibra di chiaroscuri materici, offrendo una profondità tridimensionale che migliora anche il comfort acustico.

Forest è l’orizzonte dove l’architettura si dissolve, lasciando che il respiro della natura entri finalmente in casa.

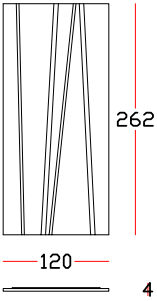

Pannelli in fibra di legno rivestiti in tessuto Aura, con inserti decorativi in legno massello di frassino tinto.

Forest is an architectural epiphany that transforms the boundary of the wall into an opening toward an abstract nature. More than a mere covering, it is a poetic paradox: dressing the walls to make them disappear, reconnecting the space with the primordial essence of the landscape.

The design challenges geometric rigidity through diagonal and fragmented lines that evoke the vital asymmetry of a forest. Thanks to millimetric bas-relief craftsmanship, the surface vibrates with material chiaroscuro, offering a three-dimensional depth that also enhances acoustic comfort.

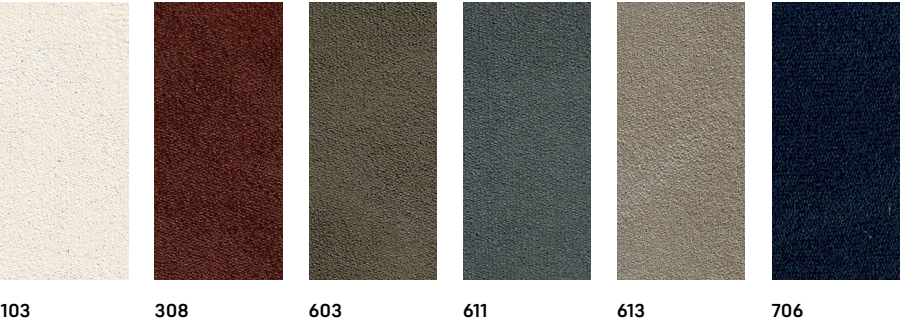

Forest is the horizon where architecture dissolves, allowing the breath of nature to finally enter the home.

Medium-density fibreboard panels covered in Aura fabric, with decorative inserts in stained solid ash wood.

Sistemi di chiusure (ante/porte) da quantificare su progetto | Locking systems (doors) to be quantified on project.
